

Daniel Nordmark

How to publish a new post
using Wordpress.

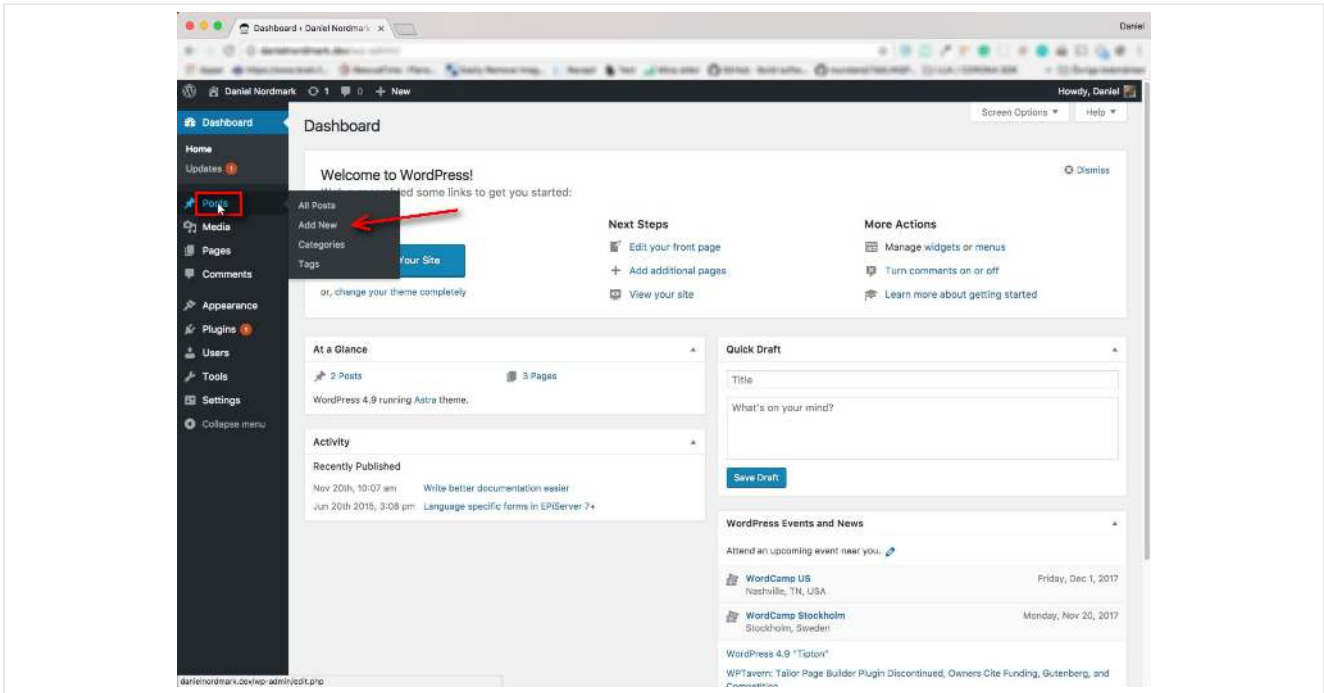

Log in

Start by going to the login URL for your Wordpress installation. Enter your username and password and click the "Log in" button.

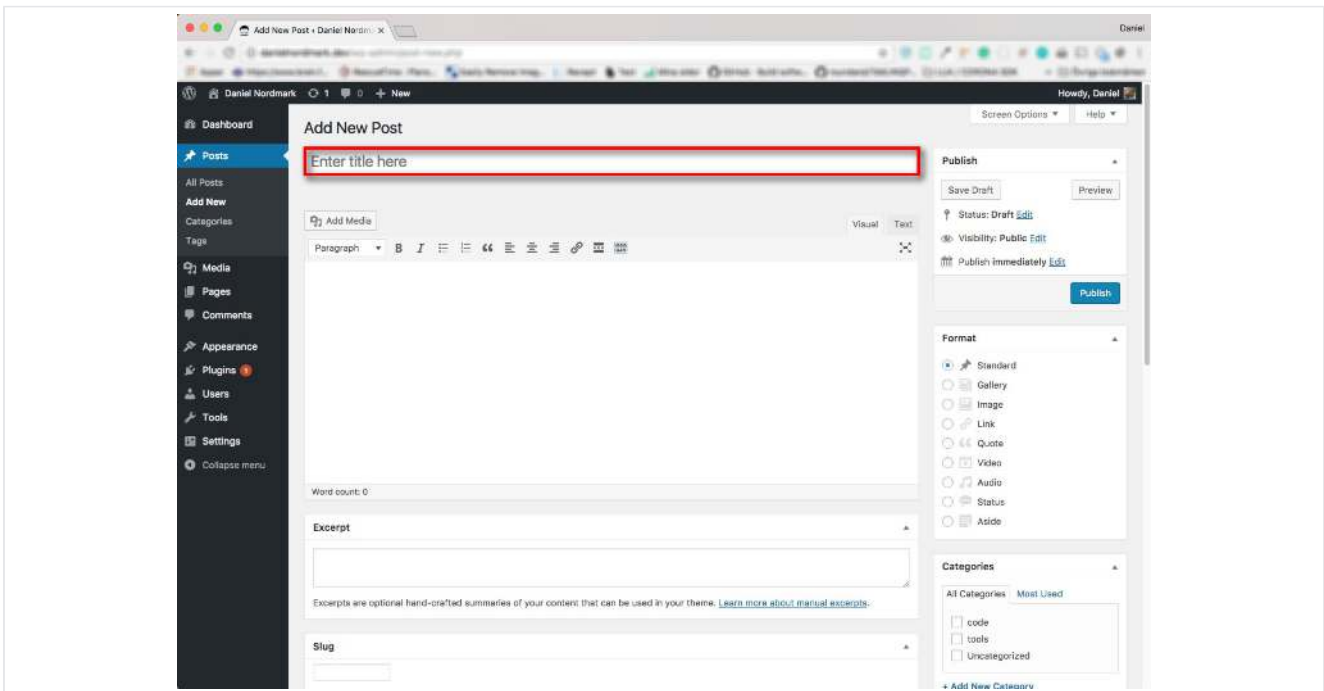

Dashboard

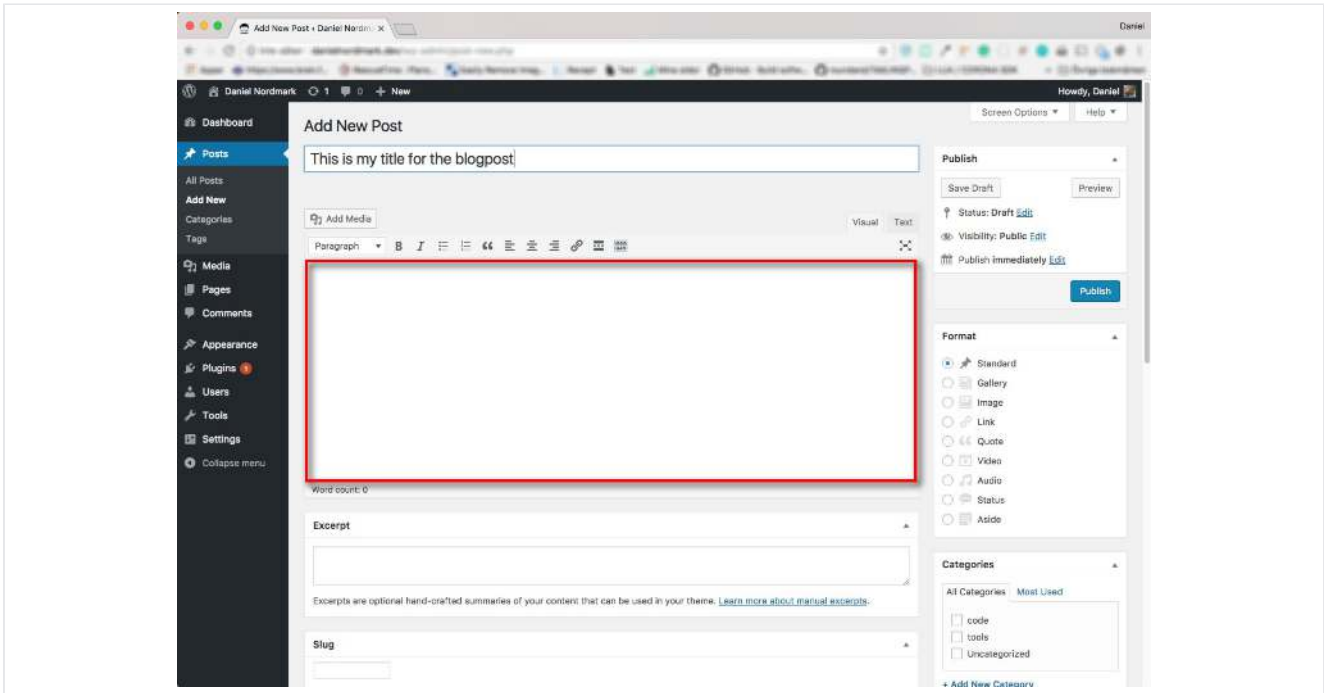

Add new post

If you hover over the "Posts" menu item on the left side, a new menu will appear. Click on "Add New".

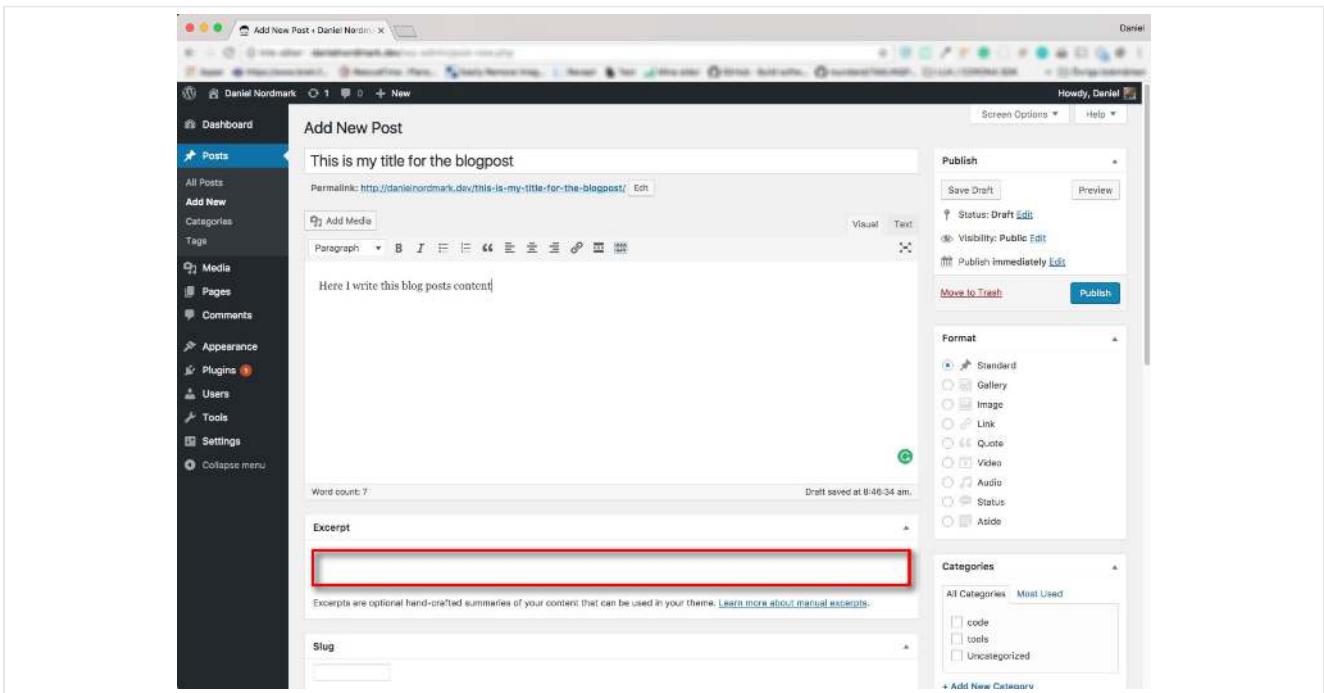

Enter a title

Now it's time to enter a title for your new blog post. The title will also be used as ht URL for the post (you can change that later).

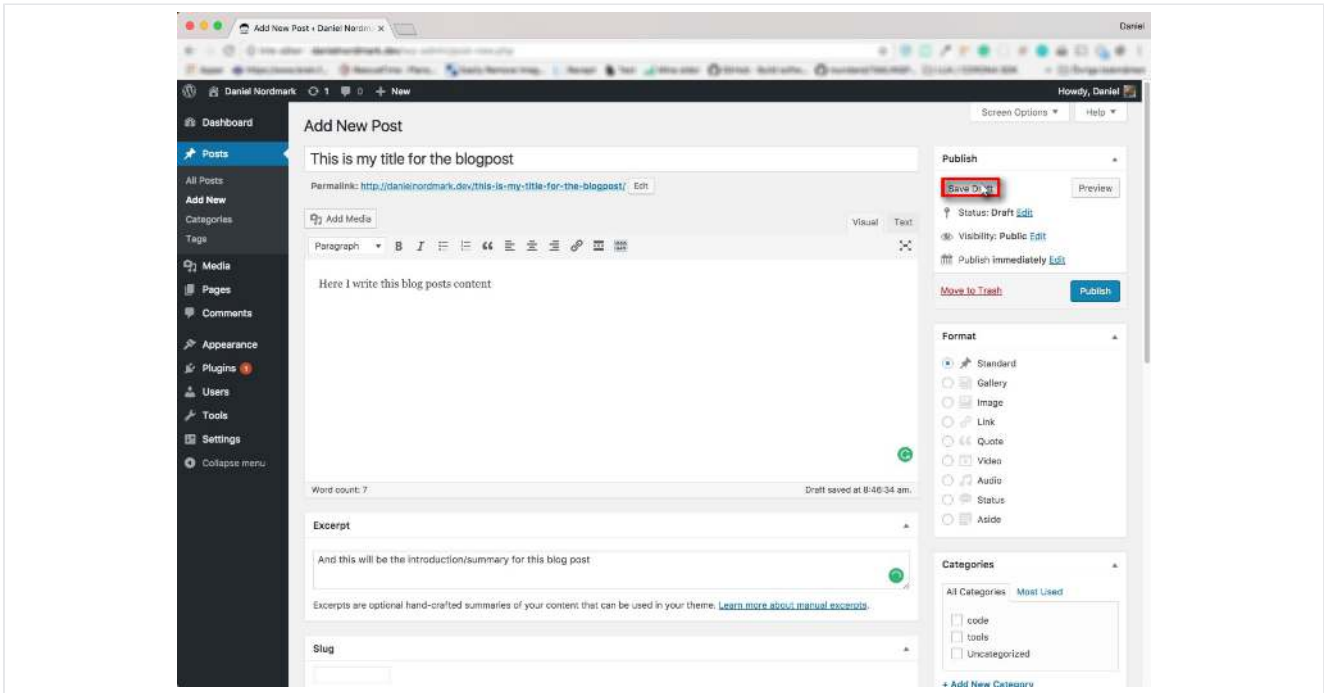

Content

Write the content of the post. You can format the text by using paragraphs, headings, insert images, links and much more.

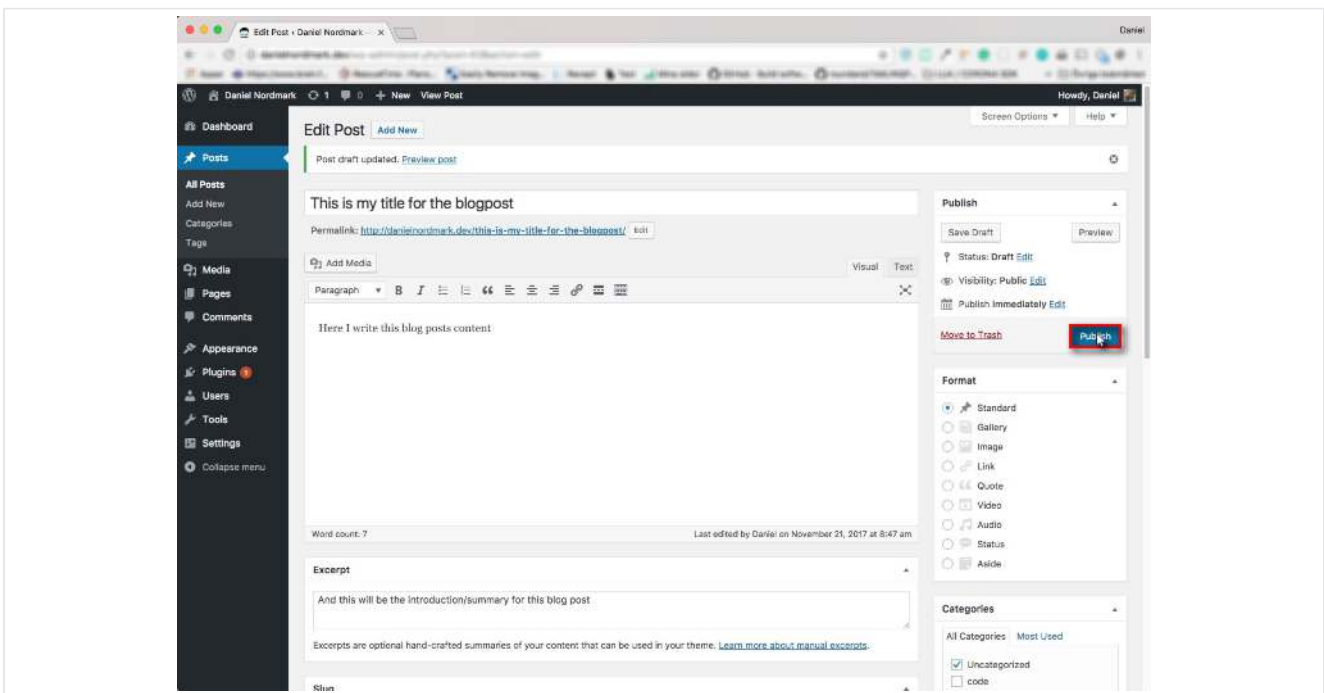

Excerpt

This will be used as the description for the blog post. In my theme, it will show where ever I list blog posts.

Save draft

If you're not ready to publish your post you can save it as a draft. This will make sure that everything you've written will be saved so you don't lose anything you've written so far.

Publish

When you feel satisfied with your content, press "Publish" and the shiny new blog post will be live for your visitors.

Time to celebrate! You've just created a new post using Wordpress.
